

Extraction of vehicle or personal data based on registration numbers for transport-related purposes – dataset (TPERAH007)

Transport payments

General provisions

The data set contains vehicle owner and holder data on a given date (=> most likely user of the vehicle*). The data set is based on a feed (text file) containing the vehicle's identifying data (registration number) and date.

The data contains vehicle and personal data. The data can be used, for example, in invoicing tasks related to transport. Disclosure of data may be restricted by a person's prohibition on the disclosure of data that is in force.

Data deliveries and pricing

The data will be extracted from the Transport Register based on feed files generated on a daily basis. The number of lines in the feed file has been limited to 70,000 lines. The data will be supplied to the broker service daily after 17:00. The broker service is provided by Traficom's system supplier.

Traficom will invoice dataset-specific fees according to the price list valid at the time (batch extractions from registers). The broker service provider will invoice the costs arising from the brokerage agreement.

Terms and conditions of use

The service is subject to terms of use. The partner must have a valid agreement with Traficom, a data access authorisation and a brokerage agreement with the broker service provider. Contact Traficom for instructions on matters concerning brokerage agreement.

Further information

Changes related to data deliveries are requested from and processed by Traficom.

For inquiries, contact: tietojenluovutus@traficom.fi

*The owner or holder data found first in the Transport Register will be returned based on the most likely user of the vehicle in the following order: 1st holder or 1st owner.

If a notification of transfer with a personal identity code is attached to the vehicle, the owner data on the most recent notification of transfer will be returned. If the vehicle has a valid notification of transfer from holder's controls, the owner data returned will be for the 1st owner.

Data content

Vehicle data

- registration number
- date of transaction
- vehicle category
- make in plain language
- mass
- notification of transfer

Personal data

- first name
- family name
- street address
- postal code
- town/city
- language of communication
- date of birth
