

Industrial Use Cases

Digital Factory

- Things Connected
- Multitude of edge clouds
- Augmented intelligence control platforms
- High-performance network

The quest for new economic value

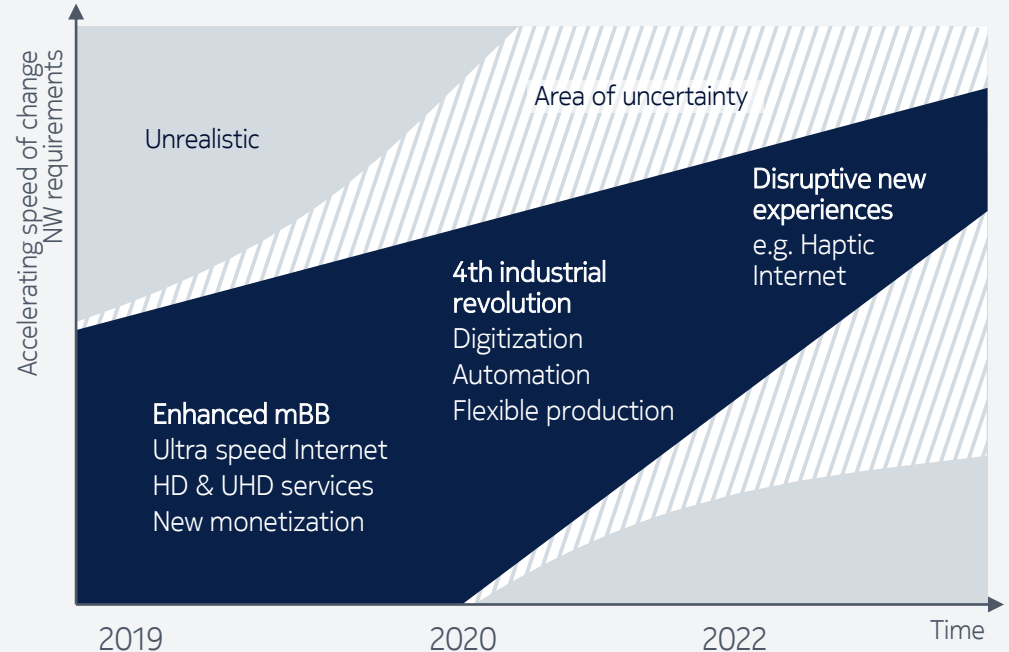

What analysts are saying

...be prepared for the obvious and the uncertain

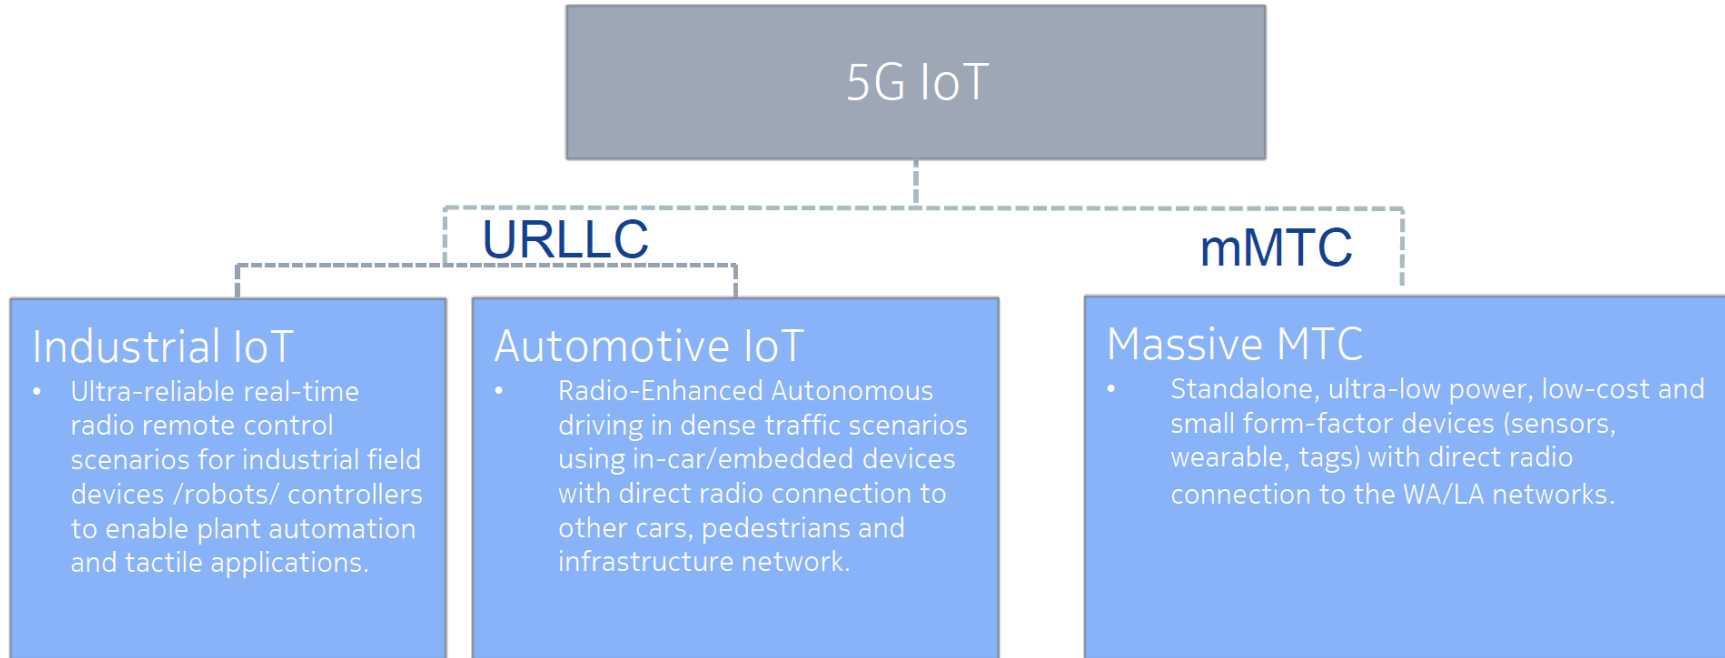

New DSP markets offer significant revenue expansion

Estimated 2025 value creation potential of the IoT
- McKinsey Global Institute

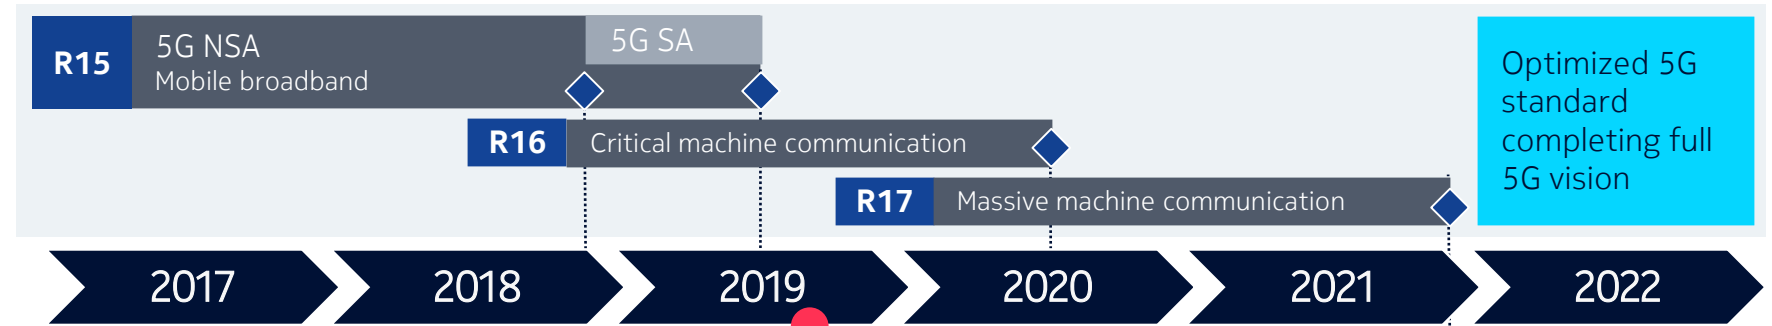

5G Internet of Things

Realizing the full promise of 5G through 3GPP evolution

5G standards roadmap

5G industry roadmap

Release 16 – under preparation

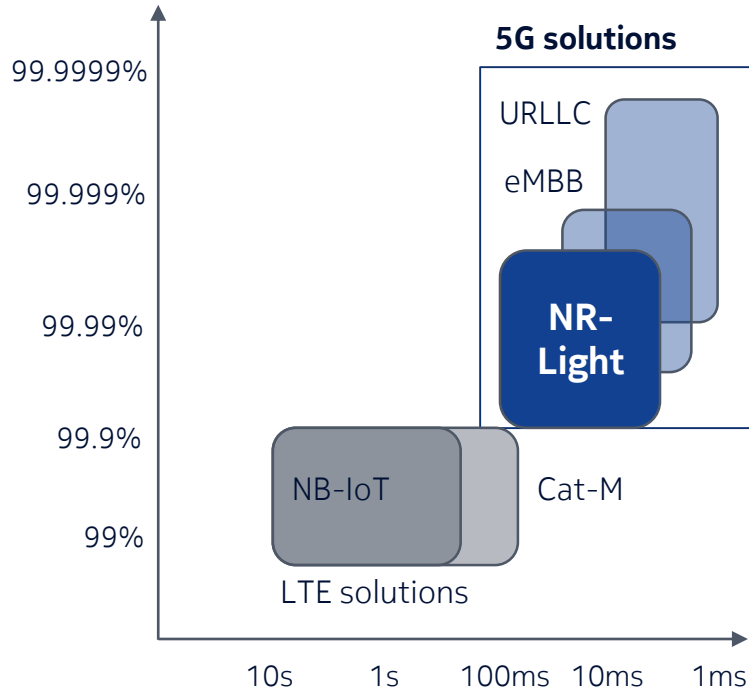

- Unlicensed 5G
 - unlicensed bands enable deployment without a frequency license
 - better performance compared to WiFi
- 5G New Radio based IoT User Equipment categories
- Industrial IoT, URLLC enhancements
 - Basic URLLC features in Rel 15, improve reliability
 - New use cases: Factory automation, Transport Industry, Electrical Power Distribution
 - Support for Wireless Ethernet and Time Sensitive Networking (TSN)

Release 17 – under discussion

- Enhanced Industrial IoT: Wide Area Time Sensitive Communications (TSC), Deterministic networking
 - need more versatile 5G synchronization/timing delivery solution for all applications/verticals
- Positioning Enhancements
 - Call location, factory/campus automation, drones
- For future: mmW bands (large bandwidths, high accuracy)

NR-Light (5G IoT) Bridging the Gap between 5G and Cat-M

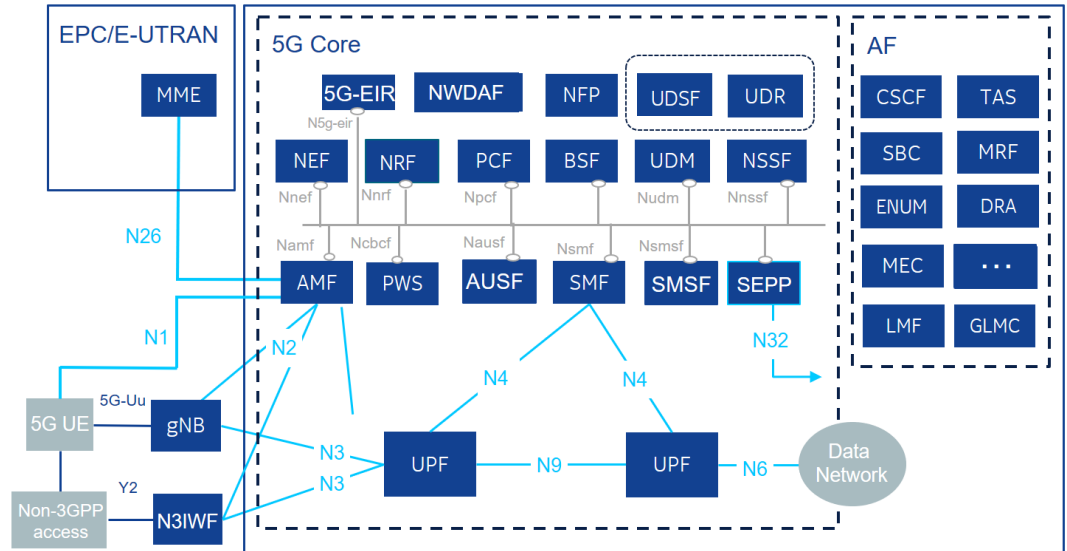

NR-Light:

- 10-100x reliability vs NB-IoT/Cat-M
 - 10-100x latency vs NB-IoT/Cat-M
 - 10 dB extra coverage vs eMBB
 - 100 Mbps data rate
- No need to support 3 different networks
 - Better system efficiency with NR
 - Deploy URLLC & NR-Light in also FR2 and new spectrum
 - Better integration and benefits from 5G core and architecture – network slicing, service based architecture

Other topics

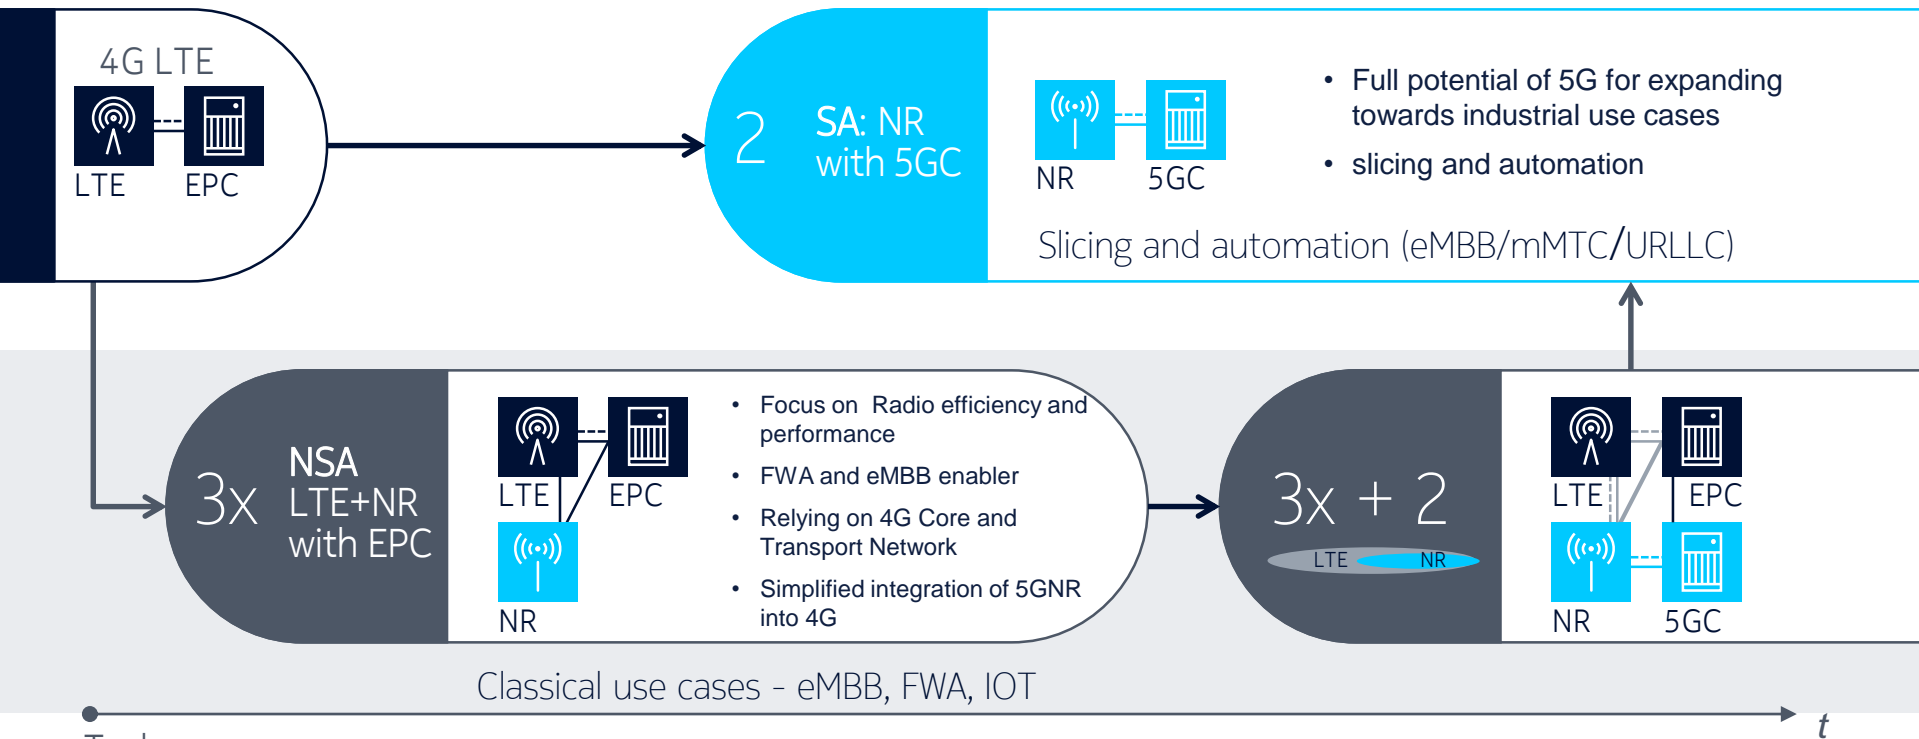

5G Core enables plethora of new services

- Non-3GPP-interworking
- Wireline access
- MEC
- Virtualization
- Security
- Open interfaces
- Applications&Services
 - Applications&Services
- Automation
- Slicing

Options for 5G evolution

Standalone (SA) and non-standalone (NSA)

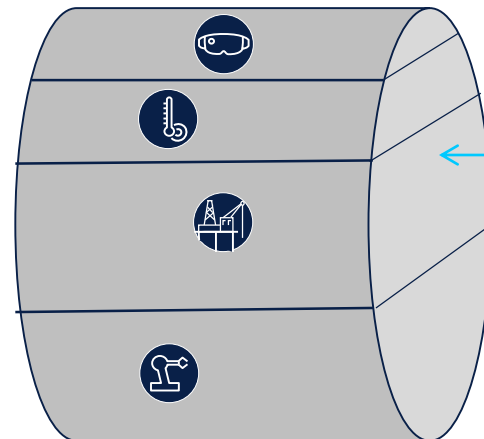

5G Network Slicing - One size does not fit all

-  Immersive gaming
high throughput / low latency
-  Meter/sensor (IoT)
low throughput / high reliability
-  Mobile tele-operation
low latency / ultra reliability
-  Industrial robotics
low latency / ultra reliability

Pre-5G era

5G slices

Network Slice
virtual network with certain
SLA (latency, throughput etc.)
